## About Our Cyber Security Research

---

Radware's Security Research Center is an in-depth resource about denial-of-service (DoS) and distributed denial-of-service (DDoS) attack tools, trends and threats. Driven by content developed by Radware's threat intelligence team, this section provides first-hand analysis that will guide the implementation of DDoS prevention techniques and solutions.

Security professionals require access to in depth analysis of today's threat landscape. This is a "go-to" resource for security professionals who want to stay updated on recent cyberattacks, analyzing security threats and identify protection strategies. and dig deeper into network threats beyond surface-level analysis, as well as identify available safeguards.

Threat Map

## Live Threat Map

---

Powered by Radware's Threat Intelligence

Radware's Live Threat Map presents near real-time information about cyberattacks as they occur, based on our global threat deception network and cloud systems event information. The systems transmit a variety of anonymized and sampled network and application attacks to our Threat Research Center and are shared with the community via this threat map.

## Security Research, Reports & Guides

---

Cyber criminals don't keep regular hours. They work around the clock to find and exploit holes in your network and that is why DDoS prevention is so important. Read the latest DDoS prevention research to understand the current threat landscape and how to stop DDoS attacks.

## Top Things to Look for in DDoS Protection

---

Does your data center infrastructure span the boundaries of both the on-premise and cloud universe? Are they safeguarded from the latest cybersecurity threats?

This list can help with what is important to look for in DDoS protection for your applications.

## Radware's 2021 Hacker's Almanac Series

---

The Threats Are Real And They Have Evolved: Understand The Evolution of Threat Actors In A Post-Pandemic World.

Modeling the threat landscape is essential to implementing a focused security strategy that aligns with your organization's most valuable assets.

Read the Almanac

## Protecting Against Threats You Can't See

---

Moving with the speed of your business introduces uncertainty about where attacks and vulnerabilities are hiding.

Download the Global Application & Network Security Report to learn how to balance business agility with security requirements.

Download the Report

## DDoSPedia

---

DDoSPedia is a glossary that focuses on network and application security terms with many distributed DDoS related definitions. It provides a central place for hard to find web-scattered definitions on DDoS attacks.
