Summary

Trojan:Win32/Spyeye is a trojan that captures keystrokes and steals login credentials through a method known as "form grabbing". Trojan:Win32/Spyeye sends captured data to a remote attacker, may download updates and has a rootkit component to hide its malicious activity.

To detect and remove this threat and other malicious software that may be installed on your computer, run a full-system scan with an appropriate, up-to-date, security solution. The following Microsoft products detect and remove this threat:
