

The format of bitmap resources

 devblogs.microsoft.com/oldnewthing/20070420-00

April 20, 2007

Raymond Chen

The next entry in the continuing sporadic series on resource formats is the bitmap. You thought accelerator tables were simple; bitmaps are even simpler.

A bitmap resource takes the same form as a `bmp` file, except that there is no `BITMAPFILEHEADER`. That's all.
